

CURVED FENDER

WEIGHT	Depending on size
WORKING LOAD	7 ton +
STANDING HEIGHT	Custom

This CUR-V line was developed in response to our client's demand for a fender that 'followed' the lines of their swimming-platform or stern.

Considering the custom-level of this product every CUR-V sold requires a unique mold based on the lines of the yacht. That said the product is always 100% tailor made.

The CUR-V is equipped with our standard 32mm deck-fitting and screw knob, and is supported on the bottom with a Pin Bracket.
